

Ahh-Some®

Product Information

Ahh-some Washing Machine / Dishwasher Bio-Cleaner & Deodorizer

Just about every household has a "high efficiency" Washing Machine and a Dishwasher that can harbor bad odors and bio-contaminants as a result of everyday use. Bio-Contaminants such as Fungi & Yeasts are typically what produces the malodors you smell around these appliances. However, there are numerous other bacteria that can be of significant numbers to allow these appliances to literally stink. Soiling from clothing, towels, and a plethora of other washable items amid low temperatures and mixed loads of wash can be spreading dangerous bugs in Washing Machines.

High soil loads in drains and filter, higher humidity, organic and inorganic nutrients, short dishwashing cycles all contribute to bio-fouling in ALL dishwashers. Many people feel that the detergents used rid these appliances of potential harmful contaminants. This is not the case! There have been numerous studies on Biofilm in Washing Machines and Dishwashers. Unhealthy Washing Machines and Dishwashers can put your family's health at risk. These appliances offer extreme conditions that suit pathogenic fungus growth. [Google Biofilm in Washing Machines & Dishwashers](#). You'll appreciate what Ahh-Some can do for these appliances.

DIRECTIONS: WASHING MACHINES

Dilute 1/2 Tsp of gel into 4 ounces of warm or tepid water so it dissolves faster. Pour this into the washing machine detergent hopper. Do a short "HOT CYCLE" with no clothing or articles in the washer during the Ahh-Some treatment. It is not necessary to add any bleach or other cleaning products with the Ahh-Some Bio-Cleaner. We recommend monthly cleanings or more often depending on the amount of use.

DIRECTIONS: DISHWASHERS

Follow the same instructions as for the Washing Machine but pour the Ahh-Some liquid directly into the Dishwasher bottom cabinet. Run on a short "Clean or Hot Cycle" with no dishes in the appliance at this time. Periodically, you should clean the filter that is located in the bottom of the dishwasher cabinet (some models). Review your manual to locate and learn how to clean the filter (if equipped). We recommend monthly cleanings only. Because of hotter temperatures and the detergent strength of most pods, monthly Ahh-Some cleaning is all you should need.

NOTE:

After you complete the Ahh-Some Bio-Cleaning "Purge" you may notice an odor permeating the appliance drum, seal or cavity. This is Normal. When disrupting Biofilm formations a not so pleasant odor may be distinguishable. Not to worry, after your next regular use of the appliance using your regular detergent, this odor will disappear.

Ahh_Some is a registered trademark of Unique Solutions, Inc.

- ***OK for use in homes with septic tanks.***
- ***Ahh-Some Bio-Cleaner treats all areas where water actually touches the appliance parts.***
- ***Commercial Washers & Hospitals should use weekly.***
