

**What is Aqua Clarity doing for you:**  
*Here is a laundry list of the benefits of using Aqua Clarity.*

- Water that glistens and shines.
- Clarity beyond anything you have ever witnessed.
- Water will feel softer and silkier on your skin.
- Sanitizer will go further than what you have experienced.
- pH and total alkalinity will stay fairly constant.
- Accumulation of organics in the plumbing will be reduced.
- Water will smell fresh, look fresh and feel fresh.
- No cloudy or greenish tinted water.
- Salt water chlorine generator time can be reduced and save on the cell.
- Much lower calcium build-up on salt water generator cells.
- More enjoyment and less managing water issues.
- Savings of hundreds of dollars per year.
- No longer forced to follow high maintenance protocols.
- Peace of mind knowing the water is safer, healthier & clearer.
- No more need for enzymes or expensive mineral cartridges.
- Just keep an acceptable ppm level of chlorine or bromine.

**Things you still need to do on a regular basis:**

You still need to have good water testing capabilities. This means having a quality test kit. We recommend staying away from DIP STRIPS and using a good quality titration kit, for example a Taylor or LaMotte kit. Be sure to purchase the right one for your sanitizer type. Always use an EPA Registered sanitizer on an ongoing basis. Be sure that the Cyanuric Acid levels never go above 50-60 ppm for greater chlorine efficiency. Many hot tub owners use regular chlorine bleach as their main sanitizer. It works great and doesn't contain cyanuric acid. A great way to start off with fresh water is to use dichlor, a granular stabilized chlorine, for a few weeks to build up a small cyanuric acid level and then begin using the bleach, (sodium hypochlorite), regimen. Many hot tub owners use a combination of these two sanitizers with great success.

Testing is the key to great water quality. We guarantee you that using the Aqua Clarity program and maintaining acceptable sanitizer levels will bless you with the best water you have ever soaked in. We even have a full Money Back Guarantee with the Aqua Clarity program. If you are not happy with the program just call or email us for a full refund check. Seriously, this is not an advertising claim. Not happy, you get a refund. Period! **If you have questions:**

Clarity beyond anything  
you have ever witnessed.

## HOW THE PROGRAM WORKS:

The Aqua Clarity program is designed to be a low-plastic, just-add-water concept where ***we supply the concentrate, you supply the container and do the mixing.*** Why pay the extra money for just water, a larger container and the extra shipping for a product? We formulated our concentrated Aqua Clarity into a 6-ounce bottle that you simply pour into a typical plastic gallon container. At Unique Solutions, we strive to do our part in making sure our world is as eco-friendly as possible. This program allows our customers to reuse the gallon container saving on plastic usage. Shipping a smaller product also allows for less waste in our environment. It's important to know, too, that we do our best to have all of our products made, packaged and shipped in recyclable products to do our part in making our world eco-friendly. **Talk about Savings!** One gallon contains 128 ounces. You will use roughly 24 ounces annually to do two purges. That leaves 104 ounces. If you use 2 ounces per week as a maintenance dose, 52 weeks x 2 oz., ***you have enough product for the entire YEAR*** for a 400 gallon hot tub. Larger or smaller gallonage tubs will require more or less Aqua Clarity to do the job.

## STEPS TO SET-UP AQUA CLARITY®:

1. Find a container, we recommend you use a typical one (1) gallon, clean and rinsed plastic container that may have been used for numerous products you have previously purchased. It is very important to use a container that has a child resistant cap for safety purposes. Remove any previous labeling on the container. We are all about safety, so please be sure to remove old labels and adhere the label we have provided in the box to the container you plan to use.
2. While wearing eye protection and latex gloves, pour all 6 ounces of the Aqua Clarity Concentrate into the clean plastic gallon container that is filled 3/4 of the way with water.
3. Then fill the rest of the container with water so the gallon container is full.
4. Place the container label that is provided in the box on your one gallon container by peeling off the back and placing the sticker label on the container you are using. This will then label the container to show the name of the product and show warnings for children and pets as well as provide other relevant information. **Your Aqua Clarity® Purge & Weekly Maintenance is now ready to use in your hot tub.**

## INSTRUCTIONS TO USE AQUA CLARITY®:

By using Aqua Clarity, your hot tub maintenance protocol will become the easiest you've ever thought possible. If your hot tub plumbing has never been bio-cleaned using an effective "purge" or a "purge" has not been performed on a regular basis, we recommend that this be done as you begin the Aqua Clarity program. There is no need to purchase another product to do this. Aqua Clarity is the product you need to complete an effective "purge" as well.

## PURGING DIRECTIONS:

1. Remove the filter(s), headrest(s) and pillow(s), if possible, before purging.
2. Add 3 ounces of your mixed Aqua Clarity per every 100 gallon capacity to your hot tub and run the jets on high for 20 to 30 minutes. For example, based on a 400 gallon capacity hot tub, you would use 12 ounces of your mixed Aqua Clarity solution.
3. You will see some colorful bio-gunk accumulate around the waterline on the shell. Wipe it as you see it so it doesn't dry out.
4. Drain the hot tub as well as you can.
5. Rinse the shell and wipe any visible particulates that you see.
6. Refill the hot tub, balance the water chemistry, and add the appropriate amount of sanitizer. Your tub is now ready to begin using the weekly Aqua Clarity Weekly Maintenance program.

## WEEKLY MAINTENANCE DIRECTIONS:

1. Add 1 ounce of the ready-made Aqua Clarity\* product per 200 gallons of water capacity **WEEKLY\*\*** to your hot tub. For best results, try to add this on the same day every week. A small amount of foaming may appear when the jets are turned on right after you add it. This is normal. If foaming is not going away 15-30 seconds after you stop running the jets, you may be adding too much product. Back off a little and add slightly less in the ensuing weeks. **DO NOT ADD MORE** Aqua Clarity than what is recommended.
2. **DO NOT ADD ANY OTHER CHEMICALS TO THIS CONTAINER.** Run your hot tub jets for 5 minutes to allow the product to circulate.
3. **Enjoy your Hot Tub!** You are able to use your hot tub as early as after the 5 minute circulation of the product is complete.

**NOTE:** To store, please be sure to keep away from children and pets. Make sure lid is on tight and place your Aqua Clarity in a cool and dry area.

***All hot tubs have a personality of their own. Some need more and some need less. After a few weeks you'll get the right pattern that works for you.***

\* This product is a cationic surfactant with other proprietary ingredients.  
\*\* If you miss a dose, it is not recommended to double up on the next weekly addition.
